

TFHC Orderliness Attendance & Participation Tracker

Development Requirements & Checklist

1. Purpose of the Application

The application will be used by the Church Unit to track attendance and punctuality of members across selected unit meetings, services, rehearsals, programmes, trainings and other designated activities.

The application should enable the unit leadership to answer, at any point:

- ☐ Who attended each meeting?
- ☐ Who was absent?
- ☐ What time did each person arrive?
- ☐ Who arrived early, on time or late?
- ☐ How many meetings has each member attended?
- ☐ What is each member's attendance percentage?
- ☐ What is each member's punctuality percentage?
- ☐ Who are the most consistent members?
- ☐ Who has repeatedly missed meetings?
- ☐ Who qualifies for recognition or reward?
- ☐ Who has crossed a predefined threshold requiring follow-up or sanction?
- ☐ What is the overall attendance performance of the unit?
- ☐ How is attendance changing over time?

The application should therefore combine four main functions:

Meeting Management → Attendance Capture → Performance Scoring → Reporting/Leaderboard

2. Core User Types

A. Unit Member

Each unit member should be able to:

- ☐ Log into the application.
- ☐ View upcoming meetings.
- ☐ View today's meeting where applicable.
- ☐ Check into an active meeting.
- ☐ See confirmation of successful attendance.
- ☐ View their attendance history.
- ☐ View their punctuality history.
- ☐ View their attendance percentage.

- ☐ View their accumulated points where enabled.
- ☐ View their leaderboard position where the leaderboard is visible to members.
- ☐ See absences recorded against them.
- ☐ Submit an explanation for an absence where permitted.
- ☐ Submit an attendance correction request if necessary.

B. Unit Administrator/Leader

The administrator should be able to:

- ☐ Create members.
- ☐ Edit member information.
- ☐ Activate/deactivate members.
- ☐ Create meetings.
- ☐ Categorise meetings.
- ☐ Define attendance requirements for meetings.
- ☐ Set meeting location.
- ☐ Set geofence radius.
- ☐ Set expected arrival time.
- ☐ Set lateness/grace period.
- ☐ Set attendance points.
- ☐ View live attendance during meetings.
- ☐ Manually record attendance where authorised.
- ☐ Correct attendance records.
- ☐ Record approved absences.
- ☐ View attendance statistics.
- ☐ Generate leaderboards.
- ☐ Generate reports.
- ☐ Define reward thresholds.
- ☐ Define follow-up/sanction thresholds.
- ☐ Export attendance data.

3. Member Database

Each member's profile should contain:

- ☐ Unique Member ID.
- ☐ First Name.
- ☐ Last Name.

- ☐ Phone Number.
- ☐ Email Address where applicable.
- ☐ Gender where required.
- ☐ Unit/Sub-team.
- ☐ Role or responsibility.
- ☐ Date joined unit.
- ☐ Membership status.
- ☐ Profile photograph where required.
- ☐ Account status.

Possible membership statuses:

- ☐ Active
- ☐ Inactive
- ☐ On Leave
- ☐ Suspended
- ☐ Exempt
- ☐ New Member

Only members designated as **Active** should normally be included when calculating expected attendance.

4. Meeting Management

This should be one of the most important modules.

Administrators should be able to create an attendance event.

Every meeting should have:

- ☐ Meeting Name.
- ☐ Meeting Category.
- ☐ Date.
- ☐ Start Time.
- ☐ Expected Arrival Time.
- ☐ Meeting End Time where applicable.
- ☐ Attendance Opening Time.
- ☐ Attendance Closing Time.
- ☐ Location.
- ☐ Latitude.
- ☐ Longitude.
- ☐ Geofence Radius.

- ☐ Meeting Status.
- ☐ Eligible members/groups.
- ☐ Attendance weighting/points.
- ☐ Whether attendance is compulsory or optional.

Example:

Meeting: Saturday Unit Meeting

Date: 15 August 2026

Meeting Starts: 9:00 AM

Attendance Opens: 8:15 AM

On-Time Threshold: 9:00 AM

Grace Period: 10 Minutes

Attendance Closes: 10:00 AM

Location: Church Auditorium

Geofence: 100 metres

Attendance Type: Compulsory

5. Meeting Categories

Administrators should be able to categorise meetings.

Examples:

- ☐ Unit Meeting
- ☐ Sunday Service
- ☐ Midweek Service
- ☐ Rehearsal
- ☐ Prayer Meeting
- ☐ Training
- ☐ Special Programme
- ☐ Workers' Meeting
- ☐ Departmental Meeting
- ☐ Retreat
- ☐ Outreach
- ☐ Leadership Meeting

This is important because different meetings may have different attendance weightings.
For example:

Meeting Type	Possible Points
Unit Meeting	10
Sunday Service	5
Rehearsal	5
Training	10
Special Programme	15

All values should be configurable.

6. Recurring Meetings

The administrator should not have to manually recreate routine meetings every week.

System should support recurrence such as:

- ☐ Every Sunday.
- ☐ Every Wednesday.
- ☐ Every Saturday.
- ☐ Weekly.
- ☐ Fortnightly.
- ☐ Monthly.
- ☐ Custom recurrence.

Administrator should also be able to:

- ☐ Cancel one occurrence.
- ☐ Reschedule one occurrence.
- ☐ Modify location for one occurrence.
- ☐ Change start time for one occurrence.

7. Attendance Check-In

When there is an active meeting, eligible members should see:

CHECK IN

Before allowing attendance, the system should verify:

- ☐ Member is logged in.
- ☐ Meeting is currently active.
- ☐ Member is eligible for the meeting.
- ☐ Device location is enabled.
- ☐ Location permission has been granted.
- ☐ Member is within the approved geofence.
- ☐ Member has not already checked in.

Upon successful check-in, system should record:

- ☐ Member ID.
- ☐ Meeting ID.
- ☐ Date.
- ☐ Exact check-in time.
- ☐ GPS latitude.
- ☐ GPS longitude.
- ☐ Location accuracy.
- ☐ Distance from meeting venue.
- ☐ Device information.
- ☐ Automatically calculated attendance status.

8. Geofencing

Attendance should only normally be recorded when the member is within the approved meeting location.

For every meeting, administrator should be able to define:

- ☐ Location.
- ☐ GPS coordinates.
- ☐ Geofence radius.

For example:

Church Auditorium

Centre: Church GPS coordinates

Radius: 100 metres

If member is within 100 metres:

✓ **You are within the attendance zone**

If outside:

You are outside the attendance zone and cannot check in yet.

The radius should be configurable for different locations.

9. Time-Based Attendance Status

Attendance status should be calculated automatically based on actual check-in time.

Example:

Meeting Time: **9:00 AM**

Attendance opens: **8:15 AM**

Grace period: **10 minutes**

The application could classify members as:

Arrival	Status
8:15–8:45 AM	Early
8:46–9:00 AM	On Time
9:01–9:10 AM	Grace Period
9:11–10:00 AM	Late
No Check-In	Absent

All thresholds must be configurable.

10. Attendance Statuses

System should support at least:

- ☐ Early
- ☐ On Time
- ☐ Late
- ☐ Very Late
- ☐ Absent
- ☐ Excused Absence
- ☐ Exempt
- ☐ Manual Attendance
- ☐ Attendance Pending Review

The administrator should determine which statuses affect scoring.

11. Automatic Absence Processing

A major requirement:

Once the attendance window for a compulsory meeting closes, the system should automatically compare:

Expected Members

against

Members Who Checked In

Members who were expected but did not check in should automatically be marked:

ABSENT

This should not require the administrator to manually mark every absent member.

12. Attendance Scoring System

The application should support configurable attendance points.

Example scoring model:

Attendance Status	Points
Early	10
On Time	10
Within Grace Period	8
Late	5
Very Late	2
Excused Absence	0
Absent	0

An alternative model may apply penalties:

Event	Points
Early	+10
On Time	+10
Late	+5
Very Late	+2
Unexcused Absence	-5
Approved Absence	0

The administrator should be able to change the scoring model without developer intervention.

13. Weighted Meetings

Not every meeting necessarily carries the same importance.

The system should therefore support meeting weights.

Example:

Regular Meeting: 1x

Training: 1.5x

Major Programme: 2x

Therefore:

On-time attendance at regular meeting:

$10 \times 1 = 10 \text{ points}$

On-time attendance at major programme:

$10 \times 2 = 20$ points

This feature can be disabled if the unit prefers a simple attendance model.

14. Attendance Percentage

For every member:

Attendance Percentage = Meetings Attended ÷ Meetings Expected × 100

Example:

Expected Meetings: 20

Meetings Attended: 18

Attendance Rate:

90%

Approved/excused absence rules should be configurable.

For example, leadership may decide whether an excused absence:

- ☐ Remains in the denominator; or
- ☐ Is excluded from expected meetings.

15. Punctuality Percentage

The application should separately calculate punctuality.

Punctuality Rate = Meetings Attended On Time ÷ Meetings Attended × 100

This is important because someone may have:

Attendance: 95%

but

Punctuality: 50%

The leaderboard should therefore not rely solely on presence.

16. Member Performance Profile

Every member should have a performance page showing:

Member: [Name]

Meetings Expected: 24

Meetings Attended: 22

On Time: 18

Late: 4

Absent: 2

Excused: 1

Attendance Rate: **91.7%**

Punctuality Rate: **81.8%**

Total Points: **210**

Leaderboard Position: **#6**

Recent Attendance:

Meeting	Date	Arrival	Status
Unit Meeting	08 Aug	8:51 AM	On Time
Sunday Service	09 Aug	7:06 AM	Late
Training	11 Aug	5:42 PM	Early

17. Leaderboard

The leaderboard is a core product feature.

It should allow leadership to rank members based on:

- ☐ Total points.
- ☐ Attendance rate.
- ☐ Punctuality.
- ☐ Number of meetings attended.
- ☐ Number of on-time attendances.
- ☐ Number of consecutive attendances.

Example:

Rank	Member	Attendance	Punctuality	Points
1	Member A	100%	100%	240
2	Member B	100%	95%	234
3	Member C	96%	100%	228
4	Member D	96%	90%	220

Leaderboard filters:

- ☐ Current Month.
- ☐ Current Quarter.
- ☐ Current Year.
- ☐ Custom Period.
- ☐ Meeting Category.
- ☐ Sub-team.
- ☐ Entire Unit.

18. Leaderboard Scoring Formula

The scoring formula should be explicit and transparent.

A recommended approach is:

Overall Score = Attendance Component + Punctuality Component + Meeting Points

Alternatively, a percentage-based score can be used:

Overall Performance Score =

Attendance Rate × 60%

Punctuality Rate × 40%

Example:

Attendance = 95%

Punctuality = 80%

Overall Score:

$(95 \times 0.60) + (80 \times 0.40)$

= 89%

The exact weighting must be configurable by the administrator.

19. Rewards Framework

The system should help identify members who qualify for recognition.

Possible configurable categories:

- ☐ 100% Attendance.
- ☐ 100% Punctuality.
- ☐ Most Consistent Member.
- ☐ Top 3 Members.
- ☐ Top 5 Members.
- ☐ Most Improved Member.
- ☐ Longest Attendance Streak.
- ☐ Perfect Attendance for the Month.
- ☐ Perfect Attendance for the Quarter.

Dashboard could automatically display:

Members Eligible for Recognition — August 2026

20. Attendance Streaks

The application should calculate attendance streaks.

For example:

Member A:

12 consecutive meetings attended

Member B:

8 consecutive on-time meetings

This can support rewards and positive recognition.

21. Sanction/Follow-Up Thresholds

The application should support predefined thresholds that flag members for leadership review.

Examples:

Level 1 – Follow-Up

- ☐ 2 consecutive absences.

System flag:

Follow-Up Required

Level 2 – Warning

- ☐ 3 absences within a defined period.

System flag:

Attendance Warning

Level 3 – Leadership Review

- ☐ Attendance falls below 70%.

System flag:

Leadership Review Required

These should preferably be **flags and recommendations**, with the final decision remaining with unit leadership.

The system should not automatically issue sanctions without leadership review.

22. Consecutive Absence Alerts

The application should identify:

- ☐ 2 consecutive absences.
- ☐ 3 consecutive absences.
- ☐ 4+ consecutive absences.

Example dashboard:

Members Requiring Attention

Member A – 3 consecutive absences

Member B – Attendance below 60%

Member C – Late to 5 consecutive meetings

23. Absence/Excuse Management

Members should optionally be able to provide reasons for absence.

Possible categories:

- ☐ Illness.
- ☐ Travel.
- ☐ Work/School.
- ☐ Family commitment.
- ☐ Emergency.
- ☐ Approved church assignment.
- ☐ Other.

Workflow:

Member submits explanation

↓

Leader reviews

↓

Approved / Rejected

↓

Attendance becomes:

Excused Absence

or remains:

Absent

24. Manual Attendance

There will inevitably be situations where:

- Phone battery is dead.
- Device has no internet.
- GPS fails.
- Member does not have a smartphone.
- Application fails.

An authorised leader should therefore be able to manually record attendance.

However, manual records must show:

Attendance Method: MANUAL

and capture:

- ☐ Person recording attendance.
- ☐ Time recorded.
- ☐ Attendance time being entered.

- ☐ Reason.
- ☐ Optional comment.

25. Attendance Correction

Members should be able to request correction where necessary.

Example:

I attended the meeting but my check-in failed.

Request should contain:

- ☐ Meeting.
- ☐ Requested attendance status.
- ☐ Explanation.
- ☐ Date submitted.

Leader can:

- ☐ Approve.
- ☐ Reject.
- ☐ Comment.

Every modification should remain in an audit history.

26. Live Meeting Dashboard

During a meeting, authorised leaders should be able to see:

Saturday Unit Meeting

Expected Members: 80

Checked In: 58

Early: 12

On Time: 37

Late: 9

Not Yet Present: 22

Attendance Rate So Far: **72.5%**

The list should update as members check in.

27. Meeting Close-Out

After the attendance window closes, the system should automatically produce:

Meeting Attendance Summary

Meeting: Saturday Unit Meeting

Expected: 80

Present: 67

Absent: 13

Early: 15

On Time: 41

Late: 11

Attendance Rate: **83.75%**

Punctuality Rate: **83.6%**

This summary should remain permanently attached to the meeting.

28. Unit Dashboard

Leadership dashboard should show:

Current Period

Total Active Members: 100

Meetings Held: 8

Average Attendance: 84%

Average Punctuality: 76%

Perfect Attendance: 21 Members

Members Below Threshold: 9

Other dashboard metrics:

- ☐ Most attended meeting.
- ☐ Least attended meeting.
- ☐ Average arrival time.
- ☐ Attendance trend.
- ☐ Number of late arrivals.
- ☐ Number of absences.
- ☐ Excused absences.
- ☐ Members requiring follow-up.
- ☐ Top performers.

29.Attendance Trends

The application should show trends over time.

For example:

Month	Attendance Rate
January	82%
February	85%

Month	Attendance Rate
March	88%
April	91%

This allows leadership to determine whether participation is improving or declining.

30. Reporting

Reports should be available by:

- ☐ Individual member.
- ☐ Meeting.
- ☐ Meeting category.
- ☐ Week.
- ☐ Month.
- ☐ Quarter.
- ☐ Year.
- ☐ Custom period.
- ☐ Sub-team.

Reports should show:

- ☐ Expected attendance.
- ☐ Actual attendance.
- ☐ Attendance percentage.
- ☐ Punctuality percentage.
- ☐ Early arrivals.
- ☐ Late arrivals.
- ☐ Absences.
- ☐ Excused absences.
- ☐ Points.
- ☐ Ranking.

31. Export

Leadership should be able to export attendance information to:

- ☐ Excel.
- ☐ CSV.
- ☐ PDF where required.

The Excel report should allow further analysis if necessary.

32. Notifications

Useful notifications include:

Before Meeting

- ☐ Upcoming meeting reminder.
- ☐ Meeting starting soon.

During Meeting

- ☐ Attendance/check-in is open.
- ☐ Successful check-in.

After Meeting

- ☐ Missed meeting notification.
- ☐ Attendance correction request.
- ☐ Excuse approved/rejected.

Leadership

- ☐ Member reaches consecutive absence threshold.
- ☐ Member falls below attendance benchmark.
- ☐ Member reaches reward threshold.
- ☐ Monthly attendance report available.

33. Fraud Prevention

The purpose is accountability rather than surveillance, but the system should reasonably prevent members from checking in for one another.

Controls should include:

- ☐ Each member uses their own account.
- ☐ Location verification.
- ☐ Duplicate check-in prevention.
- ☐ One attendance record per meeting.
- ☐ Capture device information.
- ☐ Flag unusual multiple-account activity from one device where practical.
- ☐ Detect obvious mock/fake GPS where technically feasible.

More invasive controls such as continuous location monitoring are **not required**.

34. Attendance Should Be Event-Based

The application does **not** need to continuously track members.

Location should only be required when:

Member presses Check In

↓

GPS is verified.

↓

Attendance is recorded.

↓

Location tracking ends.

The church does not need visibility into where members go after attendance has been recorded.

35. Optional QR Code + Geofence Validation

A useful additional feature is to combine geofencing with a meeting-specific QR code.
Flow:

Arrive at Venue

↓

Open App

↓

Scan Meeting QR Code

↓

System checks GPS

↓

QR Valid + Inside Geofence

↓

Attendance Recorded

This provides stronger verification than GPS alone.

The QR code can:

- ☐ Be generated automatically for each meeting.
- ☐ Become active shortly before the meeting.
- ☐ Expire after attendance closes.
- ☐ Change dynamically where stronger security is required.

36. Recommended Attendance Verification

For this use case, the preferred hierarchy is:

Option A — Simple

Login + Geofence + Check-In

Option B — Recommended

Login + Meeting QR Code + Geofence + Timestamp

Option C — Higher Security

Login + QR + Geofence + Device Verification + Timestamp

For a church unit, **Option B provides a strong balance between usability and accountability.**

37. Admin Audit Trail

Important changes should be logged.

Examples:

Member A was changed:

Absent → Present

Changed by: Unit Administrator

Reason: Attendance manually confirmed

Date: 18 August 2026

System should capture:

- ☐ User making change.
- ☐ Original status.
- ☐ New status.
- ☐ Date/time.
- ☐ Reason.

38. MVP — What Developer Should Build First

The first version should focus on:

- ☐ Member registration.
- ☐ Login/authentication.
- ☐ Member database.
- ☐ Meeting creation.
- ☐ Recurring meetings.
- ☐ Meeting categories.
- ☐ Geofence configuration.
- ☐ QR generation where adopted.
- ☐ Attendance check-in.
- ☐ Exact arrival timestamp.
- ☐ Early/on-time/late classification.
- ☐ Automatic absence identification.
- ☐ Attendance history.

- ☐ Attendance percentage.
- ☐ Punctuality percentage.
- ☐ Points calculation.
- ☐ Leaderboard.
- ☐ Admin dashboard.
- ☐ Member performance dashboard.
- ☐ Manual attendance.
- ☐ Attendance correction.
- ☐ Reports.
- ☐ Excel export.
- ☐ Basic alerts for poor attendance.
- ☐ Audit trail.

39. Phase 2

After the attendance process is working properly, consider:

- ☐ Automated WhatsApp reminders.
- ☐ SMS notifications.
- ☐ Push notifications.
- ☐ Attendance streaks.
- ☐ Badges/achievements.
- ☐ Advanced analytics.
- ☐ Automated monthly reports.
- ☐ Sub-team competitions.
- ☐ Historical performance comparison.
- ☐ Attendance heatmaps.
- ☐ Member engagement score.
- ☐ QR code rotation/dynamic QR.
- ☐ Integration with existing church membership systems.

40. Recommended Navigation

Settings

41. Critical Settings Administrator Must Control

Nothing below should require a developer to change code:

- ☐ Meeting start time.
- ☐ Attendance opening time.
- ☐ Attendance closing time.
- ☐ Grace period.
- ☐ Geofence radius.
- ☐ Early-arrival threshold.
- ☐ Late threshold.
- ☐ Meeting points.
- ☐ Meeting weight.
- ☐ Attendance scoring rules.
- ☐ Reward threshold.
- ☐ Follow-up threshold.
- ☐ Sanction-review threshold.
- ☐ Attendance percentage formula.
- ☐ Punctuality formula.
- ☐ Who can view leaderboard.
- ☐ Who can amend attendance.

42. Key Data Required for Every Attendance Record

Developer should ensure each attendance record contains:

Member ID

Meeting ID

Meeting Type

Meeting Date

Expected Meeting Time

Actual Arrival Time

Attendance Status

GPS Coordinates

GPS Accuracy

Distance from Venue

Attendance Method

Points Earned

Whether attendance was manually modified

Modification history

This dataset will provide the basis for all subsequent reporting, leaderboard, reward and accountability decisions.

43. Definition of Done

The MVP should not be considered complete until leadership can successfully:

- ☐ Create a meeting.
- ☐ Define who is expected to attend.
- ☐ Define the venue and geofence.
- ☐ Define expected arrival time.
- ☐ Open attendance.
- ☐ Allow members physically present to check in.
- ☐ Capture exact arrival time.
- ☐ Automatically identify early/on-time/late attendance.
- ☐ Automatically identify absentees after attendance closes.
- ☐ View attendance for an individual meeting.
- ☐ View attendance history for an individual member.
- ☐ Calculate attendance percentage.
- ☐ Calculate punctuality percentage.
- ☐ Calculate points.
- ☐ Generate a leaderboard.
- ☐ Identify members meeting reward criteria.
- ☐ Identify members requiring attendance follow-up.

- ☐ Correct attendance with an audit trail.
- ☐ Export the underlying records.
- ☐ Produce monthly, quarterly and annual attendance performance reports.

Ultimate Product Outcome

The application should allow unit leadership to move from simply asking:

“Who came to the meeting?”

to having a reliable participation system that shows:

**Who came → When they came → How consistently they come → How punctual they are
→ How they rank → Who deserves recognition → Who requires follow-up.**
